CONTENTS

FINITE ELEMENT MODELING OF SELECTIVE HEATING IN MICROWAVE PYROLYSIS OF LIGNOCELLULOSIC BIOMASS
Baishali Dutta, Satyanarayan R. S. Dev, and Vijaya G. S. Raghavan
1 Introduction .................................................. 2
2 Materials and Methods ..................................... 5
3 Results and Discussion ................................... 11
4 Conclusions .................................................. 20

AN ANALYSIS OF JUNCTION DISCONTINUITY EFFECTS IN THE MULTI-ELEMENT COUPLED LINES AND ITS DIMINUTION AT DESIGNING STAGE
Rana Pratap Yadav, Sunil Kumar, and S. V. Kulkarni
1 Introduction .................................................. 25
2 Analysis of Coupled Lines .................................. 28
3 Concept, Design and Simulation ......................... 31
4 Theory of Junction Discontinuity ....................... 34
5 Modified Theory of Coupled Line Design with Junction Discontinuity ........................................ 40
6 Application of Modified Theory in Design of 3-element, dB Coupled Section ............................... 45
7 Results and Discussion .................................... 47
8 Conclusion .................................................... 48

MAGNETIC-DIPOLAR-MODE OSCILLATIONS FOR NEAR- AND FAR-FIELD MANIPULATION OF MICRO-WAVE RADIATION (INVITED PAPER)
Eugene O. Kamenetskii, Roman Joffe, Maksim Berezin Guy Vaisman and Reuven Shavit
1 Introduction .................................................. 52
2 Quasistatic Oscillations in Small Samples ............... 54
3 Energy Eigenstates of MDM Oscillations in a Quasi-2D Ferrite Disk .............................................. 59
4 Interaction of MDMs with the Environmental Microwave Radiation .................................................. 66
5 Manipulating Microwaves with MDM Ferrite Particles ...... 68
6  Engineering of Novel Microwave Fields by MDM Ferrite
    Particles: The Near- and Far-field Applications ............... 77
7  Conclusion .................................................. 84

EXPERIMENTAL MODEL FOR STUDY OF ELECTROMAGNETIC PHENOMENA IN STATOR CORE-END LAMINATIONS OF LARGE GENERATORS
Gilles Vogt, Cristian Demian, Raphael Romary, Guillaume Parent and Valentin Costan
1  Introduction .................................................. 89
2  Objectives and Design ...................................... 90
3  Experimental Results ....................................... 96
4  FEM Simulations ........................................... 100
5  Conclusion .................................................. 104

MATHEMATICAL MODELS OF ELECTRODYNAMICAL PROCESSES OF WAVE SCATTERING AND GENERATION ON CUBICALLY POLARISABLE LAYERS
Lutz Angermann and Vasyl V. Yatsyk
1  Introduction .................................................. 109
2  Wave Propagation in Nonlinear Media with Cubic Polarisability110
3  Numerical Investigation of the Nonlinear Integral Equations
    and Spectral Problems ....................................... 114
4  Numerical results ........................................... 116
5  Conclusion .................................................. 133

DESIGN AND ANALYSIS OF MULTI-BAND FILTERS USING SLOT LOADED STEPPED IMPEDANCE RESONATORS
Rajas Khokle, Raj Kumar, Raghupatruni V. S. Ram Krishna
    and Nagendra Kushwaha
1  Introduction .................................................. 137
2  Evolution of A Multiband Filter ............................. 139
3  Wide Resonator Filter with Rectangular Slots ............. 146
4  Configuration of the Proposed Band Pass Filters .......... 153
5  Experimental Results of the Proposed Filters ............. 155
6  Conclusions ................................................ 158

vi
ANALYSIS OF NONLINEAR FRACTAL OPTICAL ANTENNA ARRAYS — A CONCEPTUAL APPROACH

Mounissamy Levy, Dhamodharan Sriram Kumar, and Anh Dinh

1 Introduction ................................................................. 289
2 Fractal Theory .......................................................... 290
3 Fractal Optical Antenna Arrays ....................................... 291
4 Iterated Function Systems (IFS) ...................................... 292
5 Nonlinear Fractal Concept for Optical Antenna Array .......... 294
6 Conclusion ................................................................. 306

ANALYTICAL EVALUATION OF SUB-SEA ELF ELECTROMAGNETIC FIELD GENERATED BY SUBMARINE POWER CABLES

Giovanni Lucca

1 Introduction ................................................................. 309
2 Analytical Formulas For EMF in the Sea ............................ 311
3 Formulas for the Shielding Factor .................................... 315
4 A Comparison with Different Existing Models .................... 318
5 Comparison between the Two Different Analytical Calcula-
tion Models .............................................................. 319
6 Conclusions ................................................................. 324

DESIGNING AN OCTAVE-BANDWIDTH DOHERTY AMPLIFIER USING A NOVEL POWER COMBINATION METHOD

Necip Sahan and Simsek Demir

1 Introduction ................................................................. 328
2 Wideband Doherty Combiner ........................................... 330
3 Designing Wideband Carrier/Peaking Amplifiers and Power Divider ......................................................... 335
4 Implementation of Wideband Asymmetric Doherty Power Amplifier ............................................................. 337
5 Conclusion ................................................................. 343

DESIGN AND ANALYSIS OF TAPERED SLOT ANTENNA WITH 3.5/5.5 GHz BAND-NOTCHED CHARACTERISTICS

Daeheon Lee, Haeyong Yang, and Youngki Cho

1 Introduction ................................................................. 347
