CONTENTS

A Portable Standalone Microscope by Attaching a Compact Module to a Digital Camera
Youjun Li, Xuan Zhu, Jie Chen, Fuhong Cai, Jiong Zheng, and Jianbo Guo ................................. 1

Optimized UWB Signal to Shallow Buried Object Imaging
Ali Gharamohammadi, Yaser Norouzi, and Hassan Aghaeinia .................................................. 7

A Method of Stopband Widening in BPF Based on Two-Conductor Suspended-Substrate Resonators
Aleksandr Aleksandrovich Leksikov, Alexey Mikhailovich Serzhantov, Iliya Valerievich Govorun
Aleksy Olegovich Afonin, Andrey Vitalieovich Uglyumov, and Andrey Aleksandrovich Leksikov 11

A Compact Dielectric-Filled Slotted Cavity MIMO Antenna
Soumya Sheel and Jacob C. Coetzee ............................................................................................... 17

A 77 GHz Series Fed Weighted Antenna Arrays with Suppressed Side-Lobes in E- and H-Planes
Wang Wei and Xuetian Wang ........................................................................................................... 23

A New Compact Microstrip UWB Bandpass Filter with Triple-Notched Bands and Good Stopband Performance
Xiao Liu, Caiming Zhong, Hanfei Song, Yongqi Chen, and Ting Luo ........................................... 29

A Single-Layer and Compact Circularly Polarized Wideband Slot Antenna Based on “Bent Feed”
Zhe Wu, GenMing Wei, Xi Li, and Lin Yang .................................................................................... 39

The Research of W-Band High Order Frequency Multiplier Based on Avalanche Diode
Lingling Song and Minghua Zhao ...................................................................................................... 45

Broadband Switchable 3D Structure Used for Protecting Information Equipment from Electromagnetic with Strong Field
Bo Yi, Xiwei Geng, and Li Yang ........................................................................................................ 55

A CP Antenna of Wide Half-Power Beamwidth for UHF RFID Near- and Far-Field Applications
Jingming Zheng, Yang Yang, Xiaoxiang He, and Chenyang Mao ...................................................... 61

Design of Differential-Mode Bandpass Filters on SIW Structure
Xiao Liu, Hanfei Song, Caiming Zhong, Yongqi Chen, and Ting Luo .............................................. 69

Electrically-Small Circularly-Polarized Quasi-Yagi Antenna
Son Xuat Ta ...................................................................................................................................... 75

A High Gain Double-Octagon Fractal Microstrip Yagi Antenna
Kamelia Quzwain, Alyani Ismail, and Aduwati Sali ......................................................................... 83
A Broadband High-Efficiency Rectifier Based on Two-Level Impedance Match Network
Ling-Feng Li, Xue-Xia Yang, and Er-Jia Liu ............................................................... 91

A Compact Via-Less Metamaterial Wideband Bandpass Filter Using Split Circular Rings
and Rectangular Stub
Dilip Kumar Choudhary and Raghvendra Kumar Chaudhary ................................. 99

QDSPSL-Fed Straight Dipoles Antenna Array for UHF RFID Near-Field Applications
Jingming Zheng, Chun Zhou, Yang Yang, Xiaoxiang He, and Chenyang Mao .............. 107

Modulation of Observed Thomson Scattering Spectra in a Plasma Density Irregularity
Valery A. Puchkov ........................................................................................................ 113

Reconfigurable Microstrip Antennas Conformal to Cylindrical Surface
Prasanna K. Singh and Jasmine Saini ........................................................................... 119

A Quantitative Analysis of Coupling for a WPT System Including Dielectric/Magnetic
Materials
Yangjun Zhang, Tatsuya Yoshikawa, and Takahiro Kitahara ...................................... 127

Frequency Tunable Cedar-Shaped Antenna for WIFI and WIMAX
Mervat Akram Madi, Mohammed Al-Husseini, and Karim Y. Kabalan ..................... 135
