CONTENTS

Chapter 1. COMPARISON BETWEEN FREQUENCY DOMAIN AND TIME DOMAIN METHODS FOR PARAMETER RECONSTRUCTION ON NONUNIFORM DISPERSIVE TRANSMISSION LINES

J. Lundstedt and M. Norgren

1	Introduction	3
2	Problem Formulation	4
3	Dispersion Model and Formulation of the Inverse Problem	5
3.1	The Dispersion Model in the Frequency Domain	5
3.2	The Dispersion Model in the Time Domain	8
3.3	The Values of the Electrical Parameters	9
4	The Direct Problem in the Frequency Domain	10
4.1	Wave Splitting and the Riccati Equation	10
4.2	Stray Capacitances at the Connections	11
5	The Direct Problem in the Time Domain	12
5.1	Wave Splitting	14
5.2	Green's Functions	16
5.3	The Direct Problem	18
6	The Inverse Problem in the Frequency Domain	20
7	The Inverse Problem in the Time Domain	22
7.1	De-Embedding of the Transient Response	23
7.2	Reconstruction Procedure	24
8	Numerical Results	26
8.1	Comparisons of the Solutions Obtained to the Direct Problem Using Frequency and Time domain Direct Solvers, Respectively	26
8.2	Reconstructions Using Noise Contaminated Data Generated in the Frequency Domain	27
8.3	Reconstructions Using Noise Contaminated Data Generated in the Time Domain	31
8.4	Reconstructions Using Frequency Domain Data Generated with Stray Capacitances at the Endpoints of the Band Cable	33
9	Discussion and Conclusions	36

References	37

Chapter 2. IDENTIFICATION OF RADAR TARGETS IN RESONANCE ZONE: E-PULSE TECHNIQUES

R. Toribio, J. Saillard, and P. Pouliguen

1 Introduction	40
2 Characterization of Extractive Signals or <i>E</i>-Pulse Signals	41
2.1 Synthesis of <i>E</i> -Pulse Signals	41
2.2 A Construction of the Discriminating Signal	42
2.3 Synthesis of an <i>E</i> -Pulse Signal Harmonic Domain	43
3 Validation of <i>E</i>-Pulse Method: FDTD Simulations ...	45
3.1 Case of a Conducting Dipole	45
3.2 Case of a Conducting Sphere and a Metallic Plate	45
3.3 Improvement of the <i>E</i> -Pulse Method: Gaussian Excitation	49
4 Definition of a Discrimination Factor (Extraction Discrimination Number)	52
5 Validation of the <i>E</i>-Pulse Method: Measurement Results	53
6 Conclusion	57
References	58

Chapter 3. ENERGY PATTERNS FOR A CONDUCTING CIRCULAR DISC BURIED IN A HOMOGENEOUS LOSSY MEDIUM AND EXCITED BY ULTRA-WIDEBAND GENERALIZED GAUSSIAN PULSES

M. G. M. Hussain and S. F. Mahmoud

1 Introduction	60
2 Induced Current Modes	61
3 Backscattered Electric Field Strength	63
4 Energy Patterns	66
5 Conclusions	73
References	74

Chapter 4. A NUMERICAL STUDY OF TM-TYPE SURFACE WAVES ON A GROUNDED DIELECTRIC SLAB COVERED BY A DOUBLY PERIODIC ARRAY OF METALLIC PATCHES

F. Terracher and G. Berginc

1	Introduction	76
2	Theory	78
2.1	The Computation of the Reflection Coefficient	79
2.2	The Propagation Constant	81
2.3	Definition of the Complex Square Root Function	82
2.4	The Complex Reflection Coefficient	84
3	The Search of Pole in the Complex Plane	85
4	Numerical Results	86
4.1	The Solution in a Trivial Case: Dielectric Lossless Metal-Backed Slab	87
4.2	Lossless Dielectric Slab Coated by a Doubly Periodic Array of Metallic Patches	89
4.3	General Case	91
5	Conclusion	98
	References	99

Chapter 5. EIGENFUNCTIONAL EXPANSION OF DYADIC GREEN'S FUNCTIONS IN GYROTROPIC MEDIA USING CYLINDRICAL VECTOR WAVE FUNCTIONS

L.-W. Li, N.-H. Lim, W.-Y. Yin, and J.-A. Kong

1	Introduction	102
2	DGFs for Unbounded Gyrotropic Media	103
2.1	General Formulation of Unbounded DGFs	103
2.2	Analytical Evaluation of the λ Integral	109
3	Conclusion	111
	Appendix A. Integration of λ	111
	Appendix B. Coefficients of Intermediate Results	114
	Appendix C. Coefficients for the DGF	119
	References	120

Chapter 6. 2D CAVITY MODELING USING METHOD OF MOMENTS AND ITERATIVE SOLVERS

C.-F. Wang and Y.-B. Gan

1 Introduction	123
2 Formulation	125
3 Numerical Results	126
4 Conclusion	140
Acknowledgment	140
References	140

Chapter 7. THE EQUIVALENCE OF INCLINED UNIAXIAL AND BIAXIAL ELECTRICAL ANISOTROPY IN INHOMOGENEOUS TWO-DIMENSIONAL MEDIA FOR HOMOGENEOUS TM-TYPE PLANE WAVE PROPAGATION PROBLEMS

G. A. Wilson and D. V. Thiel

1 Introduction	144
2 Exact Formulation: Inclined Anisotropy	145
2.1 Homogeneous Half Space	145
2.2 Preliminary Considerations for an Inhomogeneous Half Space	147
2.3 Perfectly Insulating Basement Solution	150
3 Exact Formulation: Fundamental Anisotropy	157
4 Conclusion	160
Acknowledgment	161
References	161

Chapter 8. TOPOLOGICAL INTENSITY SHIFTS OF ELECTRO-MAGNETIC FIELD IN LOBACHEVSKIAN SPACES. Olbers Paradox Solved, Deep Space Communication, and the New Electromagnetic Method of Gravitational Wave Detection

J. G. von Brzeski and V. von Brzeski

1 Introduction	164
2 Intensity of Light in Lobachevskian Spaces. Equation of Horosphere	165

3	Solution of Olbers Paradox — Night Sky Darkness Explained	168
4	Application to Astrophysics. Faint Source Count Problem	171
5	Object Rotation in Lobachevskian Spaces	172
6	Inelastic Scattering of Electromagnetic Waves on Local Variation of Vacuum Curvature. Electromagnetic Detection of Gravitational Waves	173
7	Application to Deep Space Communication and SETI Problem	175
8	Conclusions and Remarks	176
	Acknowledgment	178
	References	178

Chapter 9. RIGOROUS COUPLED WAVE ANALYSIS OF BIPOLAR CYLINDRICAL SYSTEMS: SCATTERING FROM INHOMOGENEOUS DIELECTRIC MATERIAL, ECCENTRIC, COMPOSITE CIRCULAR CYLINDERS

J. M. Jarem

1	Introduction	182
2	RCWA Bipolar Coordinate Formulation	186
3	Numerical Results	211
4	Summary, Conclusions, and Future Work	227
	Appendix A.	228
	Appendix B.	231
	References	235

Chapter 10. HIGH-IMPEDANCE SURFACES BASED ON SELF-RESONANT GRIDS. ANALYTICAL MODELLING AND NUMERICAL SIMULATIONS

C. R. Simovski and A. A. Sochava

1	Introduction	240
2	Analytical Model	242
	2.1 General Formulae	242
	2.2 Calculation of L and C Parameters	246
3	Validation of the Theory	249
4	Comparison with Other Structures	251

5 Conclusion	254
References	255

Chapter 11. AN INVESTIGATION OF MAGNETIC ANTENNAS FOR GROUND PENETRATING RADAR

P. T. Bellett and C. J. Leat

1 Introduction	258
2 A Measure for Antenna Bandwidth	259
3 Fundamental Limits of Small Antennas Apply Equally to Magnetic and Electric Dipoles	260
4 Magnetic Antenna Alone Able to Approach Chu Limit	261
5 Method	263
6 Discussion	266
7 Conclusions	269
Acknowledgment	269
References	269

Chapter 12. MODELING OF RF ABSORBER FOR APPLICATION IN THE DESIGN OF ANECHOIC CHAMBER

B.-K. Chung and H.-T. Chuah

1 Introduction	274
2 Modeling of RF Absorber	275
3 A Plane-Boundary Lossy Dielectric Model	277
4 Conclusions	284
Acknowledgment	285
References	285

Chapter 13. GENETICALLY EVOLVED PHASE-AGGREGATION TECHNIQUE FOR LINEAR ARRAYS CONTROL

D. I. Abu-Al-Nadi, M. J. Mismar, and T. H. Ismail

1 Introduction	288
2 Problem Formulation	289
3 Solution Using Aggregation Genetic Algorithm	290
4 Phase Control with Element Failures	294

5	Numerical Examples and Discussion	295
6	Conclusions	302
	References	303

**Chapter 14. SCATTERING BY PARALLEL
CYLINDRICAL POSTS WITH CONDUCTING STRIPS**

R. Lech, M. Polewski, and J. Mazur

1	Introduction	306
2	Theory	308
	2.1 Scattering Fields	309
	2.2 Single Post in Local Coordinate System	310
3	Estimation of Numerical Error	313
4	Numerical and Measured Results	316
	4.1 Multipost Plane Wave Scattering	316
	4.2 Waveguide Structures	319
5	Conclusion	327
	Appendix A.	328
	A.1 Dielectric Cylindrical Post with Three Metallic Strips ..	328
	A.2 Dielectric Cylindrical Post with Two Metallic Strips ...	331
	A.3 Metallic Cylindrical Post with Strips	331
	A.4 The Post with Single Metallic Strip	332
	References	332
