CONTENTS

Chapter 1. PROPAGATORS AND SCATTERING OF ELECTROMAGNETIC WAVES IN PLANAR BIANISOTROPIC SLABS — AN APPLICATION TO FREQUENCY SELECTIVE STRUCTURES

G. Kristensson, S. Poulsen, and S. Rikte

1	Introduction	2
2	Geometry	3
3	Lateral Fourier Transform of the Fields	5
	3.1 Consequences for the Maxwell Equations	5
4	Propagation in the Stratified Region	7
	4.1 Wave Splitting	7
	4.2 Propagators	9
5	General Formulation of Problem	9
	5.1 Special Case — Several Screens ($N > 1$)	13
	5.2 Special Case — One Screen ($N = 1$)	15
6	The Periodic Case — FSS	16
7	Numerical Examples	21
8	Conclusions	23
	Acknowledgment	23
	References	23

Chapter 2. ELECTROMAGNETIC IMAGING FOR AN IMPERFECTLY CONDUCTING CYLINDER BURIED IN A THREE-LAYER STRUCTURE BY THE GENETIC ALGORITHM

Y.-S. Lee, C.-C. Chiu, and Y.-S. Lin

1	Introduction	28
2	Theoretical Formulation	28
	2.1 Imaging Problem	28
	2.2 Steady-State Genetic Algorithm	33
3	Numerical Results	33
4	Conclusions	38
	Appendix A.	39
	References	42

**Chapter 3. SYMMETRY RELATIONS OF THE
TRANSLATION COEFFICIENTS OF THE
SPHERICAL SCALAR AND VECTOR MULTIPOLE
FIELDS**

K. T. Kim

1	Introduction	46
2	Scalar and Vector Spherical Multipole Fields and Their Translation Formulas	49
3	Symmetry Relations of the Translation Coefficient of the Scalar Spherical Multipole Field	52
3.1	Spatial Inversion of the Translation Vector	53
3.2	Interchange of Mode Indices	53
3.3	Simultaneous Changes of the Signs of the Azimuthal Indices	54
3.4	Reflection of the Translation Vector about the yz -, zx -, and xy -Planes	56
4	Symmetry Relations of the Translation Coefficients of the Transverse Vector Spherical Multipole Fields .	56
4.1	Spatial Inversion of the Translation Vector	57
4.2	Interchange of Modal Indices	58
4.3	Simultaneous Changes of the Signs of the Azimuthal Indices	60
4.4	Reflection of the Translation Vector about the xy -, zy -, and zy -Planes	62
5	Summary	63
	Acknowledgment	64
	Appendix A.	64
	References	65

**Chapter 4. THE ELECTROMAGNETIC-WAVE
PROPAGATION THROUGH A STRATIFIED
INHOMOGENEOUS ANISOTROPIC MEDIUM**

F. Bass and L. Resnick

1	Introduction	68
2	Electromagnetic-Wave Propagation in Isotropic In- homogeneous Medium	68
3	Equations for Electromagnetic Waves Propagating through Anisotropic Layered Media	76

4 Faraday Effect in Inhomogeneous Anisotropic Media.	78
5 Conclusions	82
Acknowledgment	82
References	82

**Chapter 5. PERTURBATIONS OF
DISPERSION-MANAGED OPTICAL SOLITONS**

A. Biswas

1 Introduction	86
2 Governing Equations	88
3 Pulse Dynamics	91
4 Variational Principle	93
4.1 Gaussian Pulses	95
4.2 Super-Gaussian Pulses	96
5 Perturbation Terms	98
5.1 Gaussian Pulses	100
5.2 Super-Gaussian Pulses	100
6 Observations	101
6.1 Gaussian Pulses	107
6.2 Super-Gaussian Pulses	112
7 Conclusions	121
Acknowledgment	122
References	122

**Chapter 6. A NOVEL EVOLUTIONARY LEARNING
TECHNIQUE FOR MULTI-OBJECTIVE ARRAY
ANTENNA OPTIMIZATION**

Y. H. Lee, B. J. Cahill, S. J. Porter, and A. C. Marvin

1 Introduction	126
2 The Neural Network Genetic Algorithm	127
2.1 Single Layer Neural Network	127
2.2 Widrow-Hoff Learning Algorithm	128
2.3 The Genetic Algorithm	129
2.4 Objective Function	130
2.5 Neural Network Enhanced Genetic Algorithm	130
3 Numerical Results	132
3.1 Case One	132

3.2 Case Two	135
3.3 Convergence	139
4 Conclusion	141
References	142

**Chapter 7. SPACE-TIME REVERSAL SYMMETRY
 PROPERTIES OF ELECTROMAGNETIC GREEN'S
 TENSORS FOR COMPLEX AND BIANISOTROPIC
 MEDIA**

V. Dmitriev

1 Introduction	146
2 Symmetry Description of the Problem	150
3 Space-Time Reversal Symmetry Properties of Green's Tensors	154
3.1 Definition of Green's Tensors	154
3.2 Time Reversal and Space Inversion Transformations of Green's Tensors	155
3.3 Differential Equations for Green's Tensors in (\mathbf{r}, ω) Domain	156
3.4 Symmetry Operators	157
3.5 Space (Rotation-Reflection) Symmetry of Green's Tensors	159
3.6 Combined Space (Rotation-Reflection)-Time Reversal Symmetry of Green's Tensors	160
4 Constraints on Green's Tensors for Media Symmetri- cal with Respect to the Restricted Time Reversal and for Media with Center and Anticenter of Symmetry .	162
5 Green's Tensors for Bianisotropic Uni-Axial Media ..	164
6 Green's Tensors for Isotropic Achiral Media	167
7 Green's Tensors for Isotropic Chiral Media	168
8 Green's Tensors for Magnetic Chiral Media	169
9 Discussion and Conclusions	171
Acknowledgment	173
Appendix A. Brief Description of Point Magnetic Groups	173
Appendix B. Matrix Representations of 3D Point Symmetry Operators	175
Appendix C. Spatial and Time-Reversal Transformation Properties of Scalar and Vector Functions, Tensors and the Curl Operator	176

Appendix D. Time Reversal, Formally Adjoint and Lorentz Adjoint Maxwell's Equations	179
Appendix E. Comparison of Symmetry Properties of the Constitutive Tensors and Green's Tensors for Reciprocal Bianisotropic Media	181
References	181

Chapter 8. A MULTI-SOURCE STRATEGY BASED ON A LEARNING-BY-EXAMPLES TECHNIQUE FOR BURIED OBJECT DETECTION

E. Bermani, A. Boni, S. Caorsi, M. Donelli, and A. Massa

1 Introduction	186
2 Formulation of the Regression Problem	187
3 LBE-Based Technique for Buried Object Detection — The SVM Algorithm	189
4 Results	191
5 Conclusions	198
References	198

Chapter 9. BATEMAN CONFORMAL TRANSFORMATIONS WITHIN THE FRAMEWORK OF THE BIDIRECTIONAL SPECTRAL REPRESENTATION[†]

I. M. Besieris, A. M. Shaarawi, and A. M. Attiya

1 Introduction	202
2 Comments on and Extensions of the Borisov-Utkin and Kiselev Work	204
3 Simplification and Extension of Kiselev's Work	206
4 Bateman Conformal Transformations within the Framework of the Bidirectional Spectral Representation	211
4.1 Brittingham's Decomposition	211
4.2 The Bidirectional Spectral Synthesis	215
4.3 The Formulation of a Novel Global <i>Ansatz</i>	223
5 Concluding Remarks	225
Appendix A. $m + 1$ -Dimensional Bateman Conformal Transformations	226
References	229

Chapter 10. DESIGN OF WIDEBAND TRIANGLE SLOT ANTENNAS WITH TUNING STUB

A. A. Eldek, A. Z. Elsherbeni, and C. E. Smith

1	Introduction	234
2	Antenna Geometry	235
3	Parametric Study	236
4	Verifications	239
5	Radiation Properties	240
6	Antenna Arrays	241
7	Effect of Bending the Antenna	243
8	Comparison with Bow-Tie Antennas	244
9	Conclusion	247
	Acknowledgment	247
	References	247

Chapter 11. NON-RELATIVISTIC SCATTERING BY TIME-VARYING BODIES AND MEDIA

D. Censor

1	Introduction	250
2	First Order Lorentz Transformation	251
3	Uniformly Moving Plane Interface	255
4	Uniformly Moving Half Space	258
5	Oscillating Plane Interface	260
6	Oscillating Half Space Medium	263
7	Boundary-Value Problem: Oscillating Cylinder	264
8	Derivation of the Scattered Field	272
9	Boundary-Value Problem: Oscillating Cylindrical Medium	274
10	Concluding Remarks	276
	References	277

Chapter 12. FAST CONVERGING AND WIDELY APPLICABLE FORMULATION OF THE DIFFERENTIAL THEORY FOR ANISOTROPIC GRATINGS

K. Watanabe

1	Introduction	279
---	--------------	-----

2	Statement of the Problem	282
3	Constitutive Relations in Fourier Space	285
4	Comparison with Previous Works	290
5	Conclusion	297
	References	298

Chapter 13. PULSE COMPRESSION USING A PERIODICALLY DIELECTRIC LOADED DISPERSIVE WAVEGUIDE

E. C. Thirios, D. I. Kaklamani, and N. K. Uzunoglu

1	Introduction	302
2	Analysis of the Guiding Structure	304
2.1	Analysis of the Finite Structure	304
2.2	Analysis of the Infinite Structure	306
3	Numerical Computations of Propagation Characteristics	308
3.1	Al ₂ O ₃ Finite Periodic Waveguide of 100 Unit Cells: Matching Transformer Based on Empirical Selection of the Layers	309
3.2	Al ₂ O ₃ Finite Periodic Waveguide of 100 Unit Cells: Matching Transformer Selection Based on the Powell Method	315
3.3	Al ₂ O ₃ Finite Periodic Waveguide of 645 Unit Cells with Matching Transformer Calculated with the Help of Powell Method	318
3.4	TiO ₂ Finite Periodic Waveguide of 1695 Unit Cells with Matching Transformer Calculated with the Help of Powell Method	320
3.5	Comparison of the Transmission Coefficients in the Cases of the Matched Periodic Mediums of 14 Unit Cells, with and without Metallic Envelope	324
4	Experimental Study of the Finite Periodic Waveguide of 14 Unit Cells	326
5	Conclusion	330
	References	331
